

VERIFIN

SYNTHETIC TEST SUITE MANIFEST

ALL DATA IN THIS TEST SUITE IS FICTIONAL AND SYNTHETIC.

This test suite is designed to verify the Verifin KYC/AML workflow, document extraction, transaction analysis, multi-file evidence handling, persistence, AI orchestration, and error recovery.

Test scenarios

File	Purpose	Expected
01_Passport_Complete.pdf	Complete identity evidence	KYC evidence present
02_Address_Proof.pdf	Address verification	Address evidence present
03_Bank_Statement.pdf	Financial supporting evidence	Supporting evidence
04_KYC_Missing_Address.pdf	Incomplete KYC	Additional evidence required
05_Normal_Transactions.pdf	Baseline AML	Generally low risk
06_Unusual_Transactions.pdf	Anomalous behavior	Review / medium-risk indicators
07_High_Risk_Transactions.pdf	Strong anomalies	High-risk indicators / escalation
08_Multi_File_January.pdf	Multi-file test	Evidence included
09_Multi_File_February.pdf	Multi-file test	Evidence included
10_Multi_File_March.pdf	Multi-file test	Evidence included
11_Malformed_Transactions.pdf	Error handling	Validation failure

SYNTHETIC

Recommended end-to-end test

Use the following sequence to test Verifin:

1. Create a new customer application for ALEXANDER SAMPLE TESTER.
2. Upload 01_Passport_Complete.pdf.
3. Upload 02_Address_Proof.pdf.
4. Upload 03_Bank_Statement.pdf.
5. Upload 05_Normal_Transactions.pdf.
6. Run the complete KYC -> AML -> Compliance workflow.
7. Verify that the application reaches the expected review state.
8. Refresh the browser and verify that all data remains.
9. Restart the server and verify that the application remains.
10. Repeat using 06_Unusual_Transactions.pdf.
11. Repeat using 07_High_Risk_Transactions.pdf.
12. Run the multi-file test with 08, 09 and 10.
13. Verify that all three transaction documents contribute to the AML evidence set.
14. Test 04_KYC_Missing_Address.pdf and verify incomplete KYC.
15. Test 11_Malformed_Transactions.pdf and verify graceful validation/error handling.
